

2021

# Annual Report

BeamUp creates opportunities and tackles the social determinants of health for communities in poverty through healthcare, nutrition, and education.

Dr. De La Rosa examines a patient at Colina de Luz orphanage in Tijuana, Mexico.

BeamUp makes it possible for non-profits around the world to have access to quality healthcare by supplying technology such as telemedicine, and electronic health records, and giving access to specialists to support the on-ground doctors in underserved areas.

**4 orphanages in Tijuana now have access to quality healthcare.**

We partnered with [Beam Healthcare](#) and [Fundación Esperanza Contigo](#) (FEC) to implement telemedicine programs at a total of 4 orphanages and empower local providers.

**Tijuana, Mexico is located South of California, just over the border.**

**From 1 orphanage to 4.**

BeamUp began with the [Colina de Luz](#) orphanage, working directly with physician volunteer Dr. De La Rosa. Two more physicians are being onboarded.

**BeamUp physician volunteers at FEC orphanages are providing proactive mental health and healthcare to 120+ children.**

### Overview

Net Income (Contributions - Expenses)	\$10,878
Beginning Cash on Hand	\$1,492
<b>Ending Cash on Hand</b>	<b>\$12,370</b>

## We're driving change with our new partners: BackpackEMR and Flow.

With the aid of our partners, we aim to provide non-profits operational efficiency for patient care and team management.

- > **BackpackEMR** supports over 30 organizations across 24 countries with digital health records created for the most remote clinics.
- > **Flow** simplifies, automates, and streamlines workflows in an all-in-one scalable platform.

### BackpackEMR Founder Lori Most speaks on the partnership and future goals:

"Many of these [very remote] clinics and medical teams do not have specialists on staff for complex cases, and do not have relationships with medical specialists who could provide feedback.

The partnership between BackpackEMR and BeamUp will help provide a higher standard of care for thousands of individuals through eConsults with Beam's specialists reviewing patient charts remotely and offering much-needed feedback on treatment plans.

BackpackEMR has large groups of partners in Haiti and East Africa, which is where we see a high need for Beam's specialists!"

## Our goals for 2022 lie in our foundations:

- Empower communities
- Educate regarding benefits of plant-based nutrition
- Prioritize a healthy mind, body, and soul
- Bring entrepreneurial dreams to life
- Offer mentorship and STEM education to youth

### BeamUp Founder Dr. Sarjoo Patel made a trip to Tijuana, Mexico in 2021 to assist with the setup of donated telemedicine equipment at an FEC orphanage.

"We implemented the equipment and our workflows into these orphanages, as well as the experience we already have as to how to have a successful healthcare program.

We needed to make sure that everything we implemented could be used by anyone at the orphanage, because ... there's not doctors or nurses there all the time. ...It had to be simple on one side, and provide critical medical information on the other side.

Our goal is to help empower the local providers to provide this care to the kids, along with any other volunteers."
